Re: Lotus Pro

Ultra Durable Floors is a manufacturer and distributor of Epic, a zero VOC urethane floor finish. Epic is a sustainable alternative to traditional floor finishes since it does not require buffing, frequent scrubbing, recoats and stripping. We work with hospitals, dialysis clinics, nursing homes, and schools on a daily basis. Healthy and environmentally friendly products are our top priority.

We have always suggested using little or no chemicals on our floors. The Epic finish can be cleaned in most environments with plain water. In fact, the use of chemicals and surfactants often leaves behind a sticky or cloudy residue which attracts soil over time, especially when applied in conjunction with dirty or saturated mops.

The Lotus cleaning system is cost-effective because it eliminates the need for many chemicals. It is antimicrobial and works beautifully with our floor finish. Because it reverts back to water, there are no negative effects on the environment. After floor installation and coating, we always recommend the Lotus as the most effective system for cleaning.

Finally, the Lotus system has been extensively tested using our ATP meter and the results are dramatic. After testing in our own homes, work place, and in restaurants, we have proven that the Lotus significantly reduces microbial presence on surfaces.

If you have any questions about the Lotus, we welcome them.
